

Cipicrete

Cipicrete is an instant concrete repair mortar consisting of a typical EPU based resin and hardener and can be used for immediate repairs for worn out industrial floors.

Cipicrete is fast setting and forms an instant piece of floor on the worn out areas. It has higher compressive strength than concrete and well adhere to old or new floors. Once applied, it can be walked on or trolley can be used within hours, thus saving valuable process hours. Cipicrete is recommended as a useful kit for maintenance managers for whom time is a prime factor.

Cipicrete is used for patching up of smaller pot holes.

Surface Preparation:

The areas to be covered or filled in should be absolutely dry, clean and devoid of dust, oil, loose floor particles, old paint, tar etc.

Directions to use.

Typical Physical properties:

Type	EPU
Density	2 gm/cc
Compressive strength	900 kg./cm ²
Flexural strength	300 kg /cm ²
Shrinkage during curing	< 0.2%
Shelf life	6 months in the unopened container.
Standard packing	19.5 kg kits
