

Walprime is water based single component primer recommended for concrete and masonry substrates. It has excellent adhesion to concrete and other cementitious substrates.

Properties:

- Excellent adhesion.
- Penetrating properties.
- Water thinnable
- Excellent bond to Acrylic, PUD & PU top coats.

Application areas:

- walprime is used as primer in conjunction with Acrylic, PUD & Polyurethane range of wall toppings.

Direction to use:

- The wall should be matured before Walprime is applied.
- In case the levelling is not proper, it could be done with the usual plaster of Paris treatment or similar cement based putties.
- Now sand the surface with sandpaper No. 100.
- Stir Walprime well.
- Apply Walprime by brush.
- Reapply after 1 hour.
- Allow it to cure for 2-3 hrs.
- The primed surface is now ready to receive putty / topcoat.

Typical physical properties

Type	Acrylic emulsion
Mixing ratio(R:H)	Single component
Colour	White
Finish	Smooth matt
Surface dry	1 - 2 hours
Tack free dry	2 - 3 hours
Hard dry	24 hrs.
Theoretical Coverage	100 - 110 sq.ft. / ltr.
Application method	Roller / brush .
Clean up	Water
Shelf life	6 months.
